HELPER BOT BETA

A Plain-English Data Flow

What Stays Local

Interview profiles, resume material and extracted text, job descriptions, personal context, prepared answers, and optional meeting history are stored locally for your Windows user. They are not synchronized as part of beta-account access.

Account, Approval, and Feedback

Supabase supports beta accounts, approval/entitlement, and feedback. Feedback contains what you enter plus basic submission details such as account identifier, app version, and submission time. It does not include local interview material, audio, transcripts, or device data.

Third-Party Services

Azure Speech receives audio and transcription-related data needed for speech recognition. OpenAI receives context needed to generate an answer. Your use of these services follows Microsoft and OpenAI terms and privacy policies.

Audio and Credentials

Important

Helper Bot does not store raw audio or microphone recordings by default. Saved Azure and OpenAI keys use Windows protected storage for your current Windows user and appear as masked values in Settings.

Your Choices

- Use Helper Bot only where you have permission.
- Review suggestions before speaking or acting.
- Sign out on shared computers.
- Never put keys, passwords, or sensitive information in feedback.

Beta notice

This beta guide is informational and is not a formal legal privacy policy.
