HELPER BOT BETA

Helper Bot 0.1.1-beta

Release channel: Beta

Release date: July 14, 2026

Installer: HelperBot-Setup-0.1.1-beta.exe

Overview

This beta update refreshes the Windows installer and tester-facing materials for the 0.1.1-beta build while preserving the existing local interview-data boundary.

New or Improved

- Application and installer identity now report 0.1.1-beta.
- The installer pipeline now builds the expected 0.1.1-beta setup executable.
- A single-instance startup guard exits cleanly when Helper Bot is already running.
- Beta access handling includes a clearer pending-approval state after account creation.
- Account sign-in, saved login handling, and tester-facing feedback flows were polished.
- Tester documentation was refreshed for installation, account approval, API setup, privacy, troubleshooting, known limitations, and feedback.

Fixed

- Feedback insert policy support was updated for authenticated beta-user submissions.
- Beta administration approval can handle pending users without an existing entitlement row.

Known Limitations

The complete experience needs internet access, approved beta access, Azure Speech, and OpenAI API configuration. Speech and AI can be delayed or imperfect, and provider quotas or outages can interrupt testing.

Upgrade and Install Notes

Download the installer from **01 - DOWNLOAD**. For a normal update, run the newer verified installer over the existing Helper Bot installation. Confirm the filename is exactly **HelperBot-Setup-0.1.1-beta.exe** before continuing.

Feedback Reminder

Use Send Feedback with the app version, expected result, actual result, and safe reproduction steps. Do not include credentials.
